

# Field Dry

## *Calcined Clay Soil Modifier*

**PrimerOne Soil Conditioners** provide solutions to maintenance problems on baseball infields and athletic turf fields. PrimerOne Calcined clay products are manufactured specifically to condition fields to improve drainage, reduce compaction and manage moisture.

**PrimerOne Field Dry** has the unique ability to absorb its own weight in water to dry out puddles and mud. PrimerOne Field Dry will not cake or harden and becomes a part of the infield soil. PrimerOne Field Dry will not break down and will work over and over again absorbing water in problem areas.

### **Puddle and Mud removal from skinned infields**

- Pour PrimerOne Field Dry into the puddle or muddy area, rake it into wet areas and allow it to absorb the water.
- Rake the area to distribute the field dry and mud. Add more PrimerOne Field Dry in the area that remains wet or muddy and follow the same procedure.
- Rake or drag the area to smooth the surface and play ball.

---

#### **Ingredient**

*100% Calcined Fullers Earth  
(also known as Calcined Clay)*

#### **Packaging**

*50 lb bags  
(40 bags/pallet)*

#### **Bulk Density**

*35.7 lbs. / cubic ft.  
19 bags (50 lb) = 1 cubic yard*

#### **Application Instructions**

*See above and/or back of bag*
